

Coding ideas:

Rev a string within same array:

1. Reverse()
2. Interchange first and last index values and so on
3. Append the same values in reverse order and then splice first half part of array

```
for (let i=s.length-1;i>=0;i--){  
    s.push(s[i])  
}  
s.splice(0,s.length/2)
```
